EarthPro

Pipebursting System

- RUGGED QUALITY ENGINEERING
- HIGH PERFORMANCE,
FAST INSTALLATION
- QUIET HYDRAULIC SYSTEM
- EASY TO OPERATE AND MAINTAIN
- DESIGNED FOR CONTRACTORS AND
RENTAL COMPANIES

THE PIPELINE SOLUTION

There are many renovation systems on the market, mostly types of inserted liner or spray lining techniques.

These systems can be effective, but generally only offer temporary solutions. Very often, increased consumer demand requires upsizing the pipe to increase capacity. At its best, a liner will only restore the original capacity.

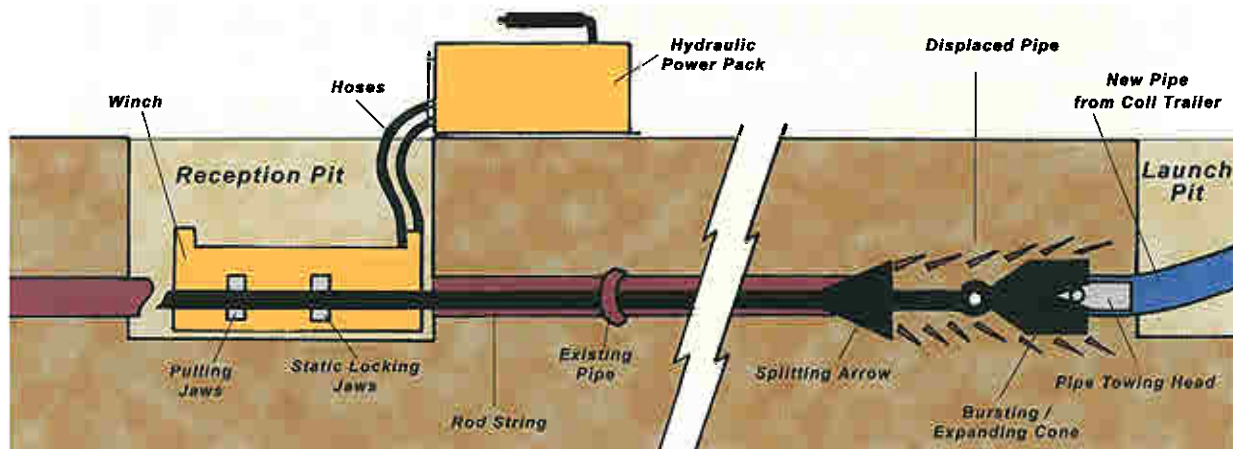

Putting off the inevitable is not usually cost effective. The long term solution is therefore replacement.

EarthPro Pipebursting System

THE HIGH PERFORMANCE SYSTEM

The EarthPro Pipebursting System - a fast and efficient hydraulic pipe replacement system. Capable of replacing most pipes from 2" - 13.5" (50 mm-350 mm), Astec's pipeburster breaks out failed pipes and replaces them in one smooth operation.

Developing up to 80,000 lbs (40 tonnes) of pulling power, capable of bursting cast iron, ductile iron, concrete, asbestos cement, PVC, pitch fibre and clayware, pipebursting is now being used to replace many types of pipelines including water, sewer, gas and communication ducts. The Astec system offers contractors a cost effective alternative to traditional open trench replacement methods that meets the more and more crucial environmental standards that are being enforced. Requiring only relatively small access pits means less intrusion on the local environment, and no road closure requirements offer clear advantages on today's increasingly congested roads. Minimal reinstatements means less road damage with fewer associated repair problems and warranty claims.
